**Subject:** IVLE: CS5228: Announcement New: Final project submission format

Dear students,

Please organize your code like the following example:

```
group_03.zip
--run.py
--readme.txt
--data/
--code/
```

run.py may import other modules in code/ folder for training and inference. It should generate the submission file by running `python run.py`. All arguments should be hardcoded in the run.py.

readme.txt includes the group member information and the description of the code structure and the running instructions (e.g., how to organize the data)

data/ includes the training and test data files to be loaded by the run.py or code in data/

You should **remove the data files downloaded from kaggle before submission.** (I can download these files directly.)

If you did any **special** preprocessing that cannot be done via the code automatically, you can include the preprocessed data in data/ folder.

code/ includes any modules (.py files)

There will be penalty if you do not follow this format. Your zip file should be less than 2MB.

Regards,  
Wei
